1. Introduction

1.1. Overview of SupportIQ

Support teams can effectively manage, respond and analyze customer interactions with the help of SupportIQ, an AI-powered customer support platform.

SupportIQ employs artificial intelligence in contrast to conventional helpdesk tools to:

- Recognize customer intent
- Provide actionable insights from support data
- Automatically classify tickets
- Recommend pertinent responses to agents.

Human agents are not replaced by SupportIQ. Rather, it enhances agents by decreasing monotonous tasks and increasing response precision. Refer to [Figure 1](#).

Figure 1. SupportIQ

1.2. How SupportIQ Helps You

SupportIQ assists you as a support user:

- Focus on high-priority issues
- Reduce manual ticket classification
- Respond more quickly using AI-suggested responses
- Maintain consistent communication quality.

1.3. Target Audience

This manual is intended for:

- **Administrators** configuring users, AI behavior, and system rules
- **Team Leads** overseeing support operations
- **Support Agents** handling daily tickets.

When a **task is role-specific**, it is made clear in each section.

2. Getting Started

2.1. Accessing SupportIQ

SupportIQ is a web-based application and does not require installation.

To access the platform:

- Open one of the supported browsers (Chrome or Edge)
- Enter the SupportIQ application URL provided by your administrator
- Sign in using your credentials. Refer [Figure 2](#).

The image shows a web-based login form for SupportIQ. At the top left, there is a blue icon of a right-pointing arrow inside a square, followed by the word "Login" in a bold, dark blue font. Below this, centered, is a blue icon of a person's head and shoulders next to a padlock. The form contains three input fields: the first is labeled "username" with a blue user icon on the left; the second is labeled "password" with a red padlock icon on the left; the third is a dropdown menu labeled "English" with a red icon of a document with a checkmark on the left and a downward arrow on the right. Below these fields is a "Remember me" toggle switch, which is currently turned off. To the right of the toggle is a link that says "Forgot password?". At the bottom of the form is a large blue button labeled "Login". Below the button is a horizontal line, and below that is a link that says "Click here to create new account." in orange text.

Figure 2. Login

2.2. Understanding User Roles

Your role determines what actions you can perform.

Role	What You Can Do
Support Agent	Respond to tickets, use AI suggestions
Team Lead	Monitor workloads, review performance
Administrator	Configure users, AI rules, and settings

3. Dashboard Overview

3.1. Purpose of the Dashboard

The Dashboard is the **central workspace** in SupportIQ. It provides a real-time overview of:

- Incoming customer requests
- High-priority issues
- Workload distribution
- AI recommendations

Figure 3. Dashboard-1

Figure 4. Dashboard-2

3.2. Dashboard Widgets Explained

Widgets	Explanation
Open Tickets	New tickets waiting for action
In Progress	Tickets currently handled by agents
AI Suggestions	AI-recommended responses and actions
Priority Alerts	Urgent tickets requiring immediate attention

3.3. Review Assigned Tickets

- 1) Log in to SupportIQ
- 2) Review the **Open Tickets** widget
- 3) Identify tickets that assigned to you
- 4) Prioritize tickets marked as **High Priority**.

4. Managing Support Tickets

4.1. Viewing and Filtering Tickets

The Tickets page allows to manage customer issues efficiently. To view tickets:

- 1) Click **Tickets** from the main menu
- 2) Select **All Tickets**.

Filter tickets to focus on what matters most. Refer to [Figure 5](#).Figure 1

Figure 5. Managing Tickets-1

4.2. Filter Tickets by Priority

- 1) Open Tickets > **All Tickets**
- 2) Select **Priority filter**
- 3) Choose High
- 4) Apply the filter

This helps you address critical issues first.

4.3. Understanding the Ticket Details Page

When you open a ticket, you see:

- Customer details
- Issue description
- Complete conversation history
- AI-suggested replies
- Internal notes (visible only to your team).

The screenshot shows the Zendesk Tickets interface. On the left is a sidebar with navigation options: Tickets, Agents, Reports, Automations, Marketplace, and Settings. The main area is titled 'Tickets' and contains a search bar and a '+ New ticket' button. Below this is a section for 'All recent tickets' with a '+ Add filter' button. A table lists 37 tickets with columns for Requester, Subject, Agent, Status, and Last Message. A red arrow points to the 'Manage' link next to the 'My open tickets' count in the left sidebar.

Figure 6. Managing Tickets-2

4.4. Respond to a Ticket

- 1) Open a ticket from the list
- 2) Read the customer's message carefully
- 3) Review suggestions in the **AI Suggestions** panel
- 4) Select a suggestion or edit it manually
- 5) Click **Send Reply**. Refer to [Figure 7](#).

Note: Use AI suggestions as a starting point, not a final answer.

4.5. Updating Ticket Status

Updating the ticket status helps your team track progress.

- 1) Open the ticket
- 2) Select a status:
 - **In Progress** – Work started
 - **Waiting on Customer** – Awaiting response
 - **Resolved** – Issue completed
- 3) Save the ticket. Refer to [Figure 8](#) and [Figure 9](#).

Figure 8. Updating Ticket Status-1

Statuses +			
STATUS NAME	BEHAVIOR	DESCRIPTION	DEFAULT STATUS
ON HOLD	Pending	Agent is waiting on external and level 2 approval to proceed further.	
NEW	Pending	Ticket is created by the contact and is left unassigned.	Make Default
IN PROGRESS	Completed	Agent is assigned and first reply to the customer has been sent.	
CLOSED	Completed	Ticket is resolved.	
OPEN	Pending	Agent is actively working on the ticket.	

Figure 9. Updating Ticket Status-2

5. AI Chatbot Operations

5.1. Role of the AI Chatbot

The AI chatbot handles repetitive customer queries such as:

- Password reset requests
- Status inquiries
- Basic product questions

This reduces agent workload.

5.2. Monitor Chatbot Conversations

- 1) Go to **Chatbot > Conversations**
- 2) Review active and escalated chats
- 3) If required, take over a conversation.

Figure 10. Chatbot

6. Knowledge Base Management

6.1. Why the Knowledge Base Matters

AI suggestions and chatbot responses depend on the **Knowledge Base**. If content is outdated:

- AI responses may be incorrect
- Customer experience may suffer.

6.2. Upload Knowledge Content

- 1) Navigate to **Knowledge Base > Upload**
- 2) Upload a document (PDF/DOCX)
- 3) Assign categories
- 4) Click **Process with AI**. Refer to [Figure 11](#).

Figure 11. Knowledge Base Management

7. Reports and Analytics

7.1. Using Reports Effectively

Reports help you:

- Identify recurring issues
- Measure response time
- Track AI effectiveness

7.2. Generating a Ticket Performance Report

- 1) Navigate to **Reports**
- 2) Select **Ticket Performance**
- 3) Choose a date range
- 4) Apply filters
- 5) If needed, export the report.

Figure 12. Reports and Analytics

8. Administration and Configuration

8.1. User Management

User management ensures that the right people have the appropriate level of access within SupportIQ. Administrators can:

- Add new users to the system
- Assign or modify user roles
- Deactivate users who no longer require access
- Reset user passwords

8.2. Add a New User

- 1) Navigate to **Settings > User Management**
- 2) Click **Add User**
- 3) Enter the user's name and email address
- 4) Select the appropriate role:
 - Support Agent
 - Team Lead
 - Administrator
- 5) Click **Save**

9. Best Practices

9.1 Best Practices for Team Leads

- Monitor ticket backlog daily
- Review AI-suggested responses for quality trends
- Identify recurring issues and escalate them for product improvement
- Use reports to balance agent workloads

9.2 Best Practices for Administrators

- Regularly update knowledge base content
- Review AI confidence and escalation settings monthly
- Audit user roles and permissions
- Monitor chatbot failure and escalation rates

Tip: Schedule periodic reviews of AI performance to maintain response accuracy.

9.3 Best Practices General

- Review AI suggestions before sending
- Keep knowledge content current
- Use filters to manage workload
- Monitor chatbot escalations daily

10. Troubleshooting

10.1 AI Suggestions Not Appearing

Possible Causes:

- Knowledge base content not indexed
- AI confidence threshold set too high

Resolution:

- 1) Verify that knowledge base documents are uploaded and processed
- 2) Review AI confidence settings
- 3) Reprocess knowledge base content if required

10.2 Unable to Update Ticket Status

Possible Causes:

- Session timeout
- Temporary network issues

Resolution:

- 1) Refresh the browser
- 2) Log in again if prompted
- 3) Retry the action

10.3 Chatbot Not Responding

Possible Causes:

- AI service delay
- High chatbot traffic

Resolution:

- 1) Monitor chatbot status from the dashboard
- 2) Escalate affected conversations to agents
- 3) Contact the administrator if the issue persists

10.4 Reporting Data Appears Incorrect

Possible Causes:

- Filters applied incorrectly
- Data synchronization delay

Resolution:

- 1) Review applied filters
- 2) Refresh the report
- 3) Allow time for data refresh if recent changes were made.

11. Glossary of Terms

The glossary defines commonly used terms in SupportIQ to ensure consistent understanding.

Table 1. Glossary of Terms

Term	Definition
AI Suggestions	System-generated response recommendations based on historical data and knowledge base content
Ticket	A recorded customer support request
SLA (Service Level Agreement)	The expected response or resolution time for a ticket
Chatbot	An AI-driven assistant that handles common customer queries
Knowledge Base	A repository of documents used by AI to generate responses
Escalation	Transfer of a customer issue from AI to a human agent
Confidence Threshold	Minimum accuracy level required for AI to suggest a response
Auto-Resolution	Automatic ticket closure based on predefined AI rules
Internal Notes	Notes visible only to support team members
